September 2026

Applied Materials Israel will host the 2nd eBeam Horizon Workshop on November 16, 2026, in Rehovot.

Building on the momentum of the **eBeam Horizon Research Grants Program** launched in 2025, the workshop brings together researchers from Israeli academia and Applied to share ideas, tackle real industry challenges, and open new avenues for collaboration.

The program will include:

- An **overview of Applied Materials Israel** and the **key research challenges** in semiconductor metrology and inspection
- Progress updates from current eBeam Horizon grant recipients
- Research highlight presentations from academic groups advancing electron-beam technologies
- The launch of **eBeam Horizon Research Grant Call #2**

Graduate students are especially encouraged to attend.

Beyond the formal program, the workshop offers an open forum for discussion, knowledge exchange, and closer ties between Applied and Israel's eBeam academic research community. The day closes with a roundtable on the future of industry-academia collaboration and the advancement of electron-beam technologies.

A detailed agenda will follow closer to the date.
